

# CC ARCHITECTURAL

**J**azz up your walls with the soft, seductive feel of leather.

LeatherLok is a new leather surfacing product that can enhance focus walls in lobbies, reception areas, boardrooms, entranceways - wherever you want to make a design statement!

Available in just about any leather color imaginable, LeatherLok provides an elegant architectural and design feature by supplying large-scale yet elegant texture to a wall or ceiling. Surprisingly lightweight, applications can also include screen systems, doors and furniture detailing.

LeatherLok is made of 3-ply wood strips that are pre-formed, wrapped in leather and “woven” together in a basketweave pattern forming handy size modules. These modules fit together to create a seamless grid system that can cover small areas or entire walls.

The system can be purely decorative or it can be functional for concealing items. The intermittent reveals between the strips can provide ventilation or, backed with contrasting colors or lighting, LeatherLok can make an interesting visual statement. Backed with acoustic foam, it can be functional for home theaters, lobbies or boardrooms to help minimize noise levels.

Try combining LeatherLok with LeatherTile! For example, LeatherLok can cover a wall down to desk or chair rail height and LeatherTile, installed flush with the frame, can continue the leather look right down to the floor and even across the floor.

*Also available:*

**WoodLok** – available in a wood version without leather. Provided unfinished, WoodLok can be stained and finished to match any interior.

**MetaLok** – solid, cast aluminum version, available in natural aluminum color.

## Product Information:

**Dimensions:** Available in 2 widths of strips - 1 5/8” and 2 5/8”

- 1 5/8” strips form a 7 1/2” x 7 1/2” module, approximately 3/8” thick
- 2 5/8” strips form a 12” x 12” module, approximately 1/2” thick

**Construction:** 3-ply plywood plus face veneer; MetaLok is solid, cast aluminum.

**LeatherLok:** Leather has a light coat of finish for protection. Leather is available in virtually any color. Designer must supply a sample for matching.

**WoodLok:** Available in cherry, maple and oak veneers, unfinished.

**MetaLok:** Solid cast aluminum, natural color.

Please call your Rep for flammability classifications.

**CCLI – More than just leather!**
