

CC ARCHITECTURAL

Sensual, seductive, lustrous. These are just a few words that describe it!

LeatherTile is a thick, solid leather for vertical and horizontal applications. A beautiful and elegant treatment for floors, walls and furniture as well as architectural detailing.

French hides are vegetable-tanned in Italy in the traditional, old-world style.

This tanning procedure is certified by "The Consortium of Genuine Italian Vegetable Tanned Leather" and is guaranteed to be totally biodegradable. No chrome, pentachlorophenol or benzene dyes have been used in the process.

LeatherTile has a patina that has transparency, color depth, brightness and color intensity, providing a rich and lustrous look that invites the touch, as well as the seductive aroma that only genuine vegetable tanned leather can provide.

LeatherTile is resilient and provides incredible and sensual walking comfort, as well as sound absorbency and heat insulation. LeatherTile will improve with age and develop a character of its own, adding warmth and elegance to any environment. Its natural markings, indicative of real leather, further enhance the beauty of this product.

Stocked in 7 colors in large sheets of approximately 10-12 sq. ft., these may be die-cut to any size or shape or left in large sections for installation in table or desk tops. The leather is flexible and can be wrapped around desk edges, stairs or columns.

Custom colors are available with a minimum order of 500 sq. ft.

Imagine the design possibilities! Cover an entire floor or

create a custom mosaic pattern as a border in a room. Define the area under the baby grand

piano. Create leather stair treads for unequalled style. Add warmth and value to a private study or executive office. The applications are limitless.
